

Eco Power Solutions Presents Flagship Technology at ASME Turbo Expo 2010

Glasgow, Scotland – United Kingdom – June 17, 2010

Eco Power Solutions, a leading developer of energy recovery and emission controls technology, announced today that President and CTO, Wayne Littleford and Vice President of Engineering, Sanjeev Jolly, will deliver a technology paper titled, AN INNOVATIVE APPROACH TO EMISSION REDUCTIONS & HEAT RECOVERY – COMPLY UNITS at the ASME Turbo Expo on June 17, 2010. The event will be held at the Scottish Exhibition and Conference Center in Glasgow, Scotland.

“We are extremely honored to have this opportunity to present to ASME”, says Jolly. “ASME represents some of the most forward thinking individuals in our field and ASME Turbo Expo brings together engineers, research scientists, educators and other professionals involved in the design, operation, and maintenance of gas turbines. This is the perfect venue to introduce our multi-pollutant emission controls and energy recovery technology, the COMPLY 2000.”

“The COMPLY 2000 is a very unique and advanced emission control technology. The units are able to remove greater than 96% of harmful air quality emissions in one system while recovering significant waste heat from the flue gas stream,” say Littleford. “Our systems are an ideal solution for both new and retrofit power generation applications. The COMPLY gives our clients a solution that exceeds government mandates on emissions levels now while providing an accelerated payback on capital costs of the project through the recovery of waste heat.”

About ASME

ASME helps the global engineering community develops solutions to real world challenges. Founded in 1880 as the American Society of Mechanical Engineers, ASME is a not-for-profit professional organization that enables collaboration, knowledge sharing and skill development across all engineering disciplines, while promoting the vital role of the engineer in society. ASME codes and standards, publications, conferences, continuing education and professional development programs provide a foundation for advancing technical knowledge and a safer world.

About Eco Power Solutions

Eco Power Solutions is a leading developer and provider of patented turnkey energy recovery and emission control technology, COMPLY 2000®, to utility and industrial clients. Eco Power Solutions technology provides a greater than 96% reduction in emissions (i.e. sulphur dioxide - SO_x and nitrogen oxide – NO_x, Mercury – Hg, Particulate – >PM_{2.5}), along with a 10% - 25% reduction in Carbon Dioxide (CO₂). Additionally, the company's technology is capable of generating supplementary energy by recovering waste heat that normally escapes into the atmosphere, thus providing a significant reduction in operating costs and increase energy reliability.
